Commodore is a modern, innovative 9-cell student canopy.

Teaching the art of canopy flying implies special requirements to the equipment in use: precise and comfortable deployment, high stability under ultra low load, flat glide path with sufficient horizontal speed, easy flare and landing. Commodore meets all these requirements.

Our contacts: 04128, Ukraine, Kyiv, 26B Boryspilsky Str tel./fax: (38044) 566 0142 info@skylark.com.ua

Upper skin and ribs of the Commodore are made of ZP material, other parts are made of F-111. This combination significantly extends service life of the canopy while does not hurt the comfortable packing.

The unique feature of Commodore is the use of divided across panels on the bottom skin. This enables the use of highly contrast color patterns, that lets distinctively spot student canopy even in the crowded sky.

Safe wing loading range of Commodore lies between 0.6 and 1.25 lb/sq.ft. Recommended loading for the students is 0.65 - 0.90 lb/sq.ft. The canopy is available in following sizes: 190, 210, 230, 250, 270 and 290.

Commodore is equipped with collapsible slider and Dacron-525 lines. Lower steering lines are made of Dacron-1000 and initially come with preset length.
