

## Cypres battery shelf life / operational service

Herewith we confirm that the shelf life of Cypres batteries is 3 years maximum.  
We recommend the storage in a dry and cold environment approx. not more then 6 degree Celsius.

After 3 years of storage the batteries can be used in between the regular limits.

The limits of the battery lifetime are:

500 jumps, 2 years or an error code in the self-test - whatever comes first.
