## Sun Path Products Inc. / Rigging Innovations

Dear Sun Path Products Customers, Riggers and DZ management.

This letter is to reference to TB-266 recommendations made by the PIA (Parachute Industry Association) Rigging Committee and is intended to help alleviate any misunderstanding in the use of Tamper Resistant Seals when properly sealing a Sun Path Reserve Container.

In the past, lead seals were the standard however with the update of TB-266 Sun Path Products in now recommending the following seals for use. Plastic, Paper and Lead Seals are recommended as Tamper Resistant safety measures and must be affixed to the reserve in such a manner as once the reserve is used the seal would break and not be able to be reused. The seal(s) should still break under the current standard of 4.75lbs.

We are aware that with this update there will be some confusion and hope that this memo helps in the understanding of our recommendation.

Please reference PIA TB-266 for more information, <https://www.pia.com/wp-content/uploads/TB-266pdf>. You can also find it via google "TB 266 PIA".

V/R
